reproductive biology and
taxonomy pdf - Reproduction (or
procreation or breeding) is the
biological process by which new
individual organisms "offspring"
are produced from their "parents".
Reproduction is a fundamental
feature of all known life; each
individual organism exists as the
result of reproduction. There are
two forms of reproduction:
asexual and sexual. In asexual
reproduction, an organism can
reproduce without the ...

Reproduction - Wikipedia -
Cucurbita species fall into two
main groups. The first group are
annual or short-lived perennial
vines and are mesophytic, i.e.
they require a more or less
continuous water supply. The
second group are perennials
growing in arid zones and so are
xerophytic, tolerating dry
conditions. Cultivated Cucurbita
species were derived from the
first group. Growing 5 to 15
meters (16 to 49 ft) in height or ...
